FORDHOOK 242 BUSH

70 Days

Was a top ranking All-American vegetable for 1945, a bronze medal winner, developed by the U.S.D.A. and released in 1942. Fordhook 242 is similar to regular Fordhook, differing from it chiefly in that pods are shorter and uniformly curved. Pods contain a very high percentage of four beans and shelled bean is identical with regular Fordhook. Outstanding characteristic of 242 is its ability to set under adverse weather conditions, particularly high temperatures. In nation-wide tests for the past two years 242 has outyielded regular Fordhook at a three to two rate. Quality is excellent. Recommended for freezing.

HENDERSON BUSH

65 Days

Bush, 16 inch, erect, runnerless, dark, glossy green. Pods, 3½ inch, curved, flat, dark green with 3 to 4 beans. Seed, small, white, flat.

PEERLESS LIMA

69 Days

A bush lima, developed and released by U.S.D.A., primarily for canning and freezing trade. The bush is distinctly different from other lima types (with exception of Fordhook 242) in that main stem is very short, supporting many erect branches.

Pods are set at base of branches in a clusterlike manner, being difficult to pick by hand, but ideally suited to vining. Pods are shorter than 242, curved, containing 2-3 beans.

Beans at table maturity are excellent green, flavor and quality unexcelled, prolific, particularly in eastern part of U. S. Variety has same excellent ability to set under adverse weather conditions. Dry seed slightly smaller than Fordhook 242—and very uniform CANNER and FREEZER.
